Integrated Pest Management Farm Biosecurity
May 31st, 2020 — Integrated Pest Management (IPM) defines the use of biological, cultural, and chemical practices to control insect pests in agricultural production. It seeks to use natural predators or parasites to control pests using selective pesticides for backup only when pests are unable to be controlled by natural means. IPM should not be confused with anic practices. It does not discourage spraying.

Diseases and Pests of Citrus (Citrus spp)
May 26th, 2020 — Received 23 July 2008, accepted 15 October 2008. Invited review. Tree and Forestry Science and Biotechnology 2009 Global Science Books. Diseases and Pests of Citrus (Citrus spp) Paula F. Tennant1, Dwight Robinson1, Latanya Fisher2, Stacy Marie Bennett1, Dave Hutton1, Phyllis Coates Beckford1, Wayne McLaughlin3 1 Department of Life Sciences, The University of the West Indies, St. Augustine. 2 Vegetable Science, University of Florida, Gainesville. 3 Dept. of Entomology, University of Florida, Gainesville.

Brief History of Integrated Pest Management
